Concept of the Individual Master File (IMF)

(1) The Individual Master File is a magnetic tape record of all individual income tax filers, in Social Security Number sequence, and is maintained at the Martinsburg Computing Center. All tax data and related information pertaining to individual income taxpayers are posted to the Individual Master File so that the file reflects a continuously updated and current record of each taxpayer's account. All settlements with taxpayers are effected through computer processing of the Individual Master File account and the data therein is used for accounting records, for issuance of refund checks, bills or notices, answering inquiries, classifying returns for audit, preparing reports and other matters concerned with the processing and enforcement activities of the Internal Revenue Service.

(a) Design—The Individual Master File is designed to accumulate in each taxpayer's account all data pertaining to the income taxes for which the taxpayer is liable. The Account is further sectionalized into separate tax periods (Tax Modules) each reflecting the balance, status, and transactions applicable to the specific tax period. This includes the returns filed, assessment, debit and credit transactions, and all changes made to the filed tax returns.

(b) Taxpayer Accounts—Each taxpayer account has an Entity Module and one or more Tax Modules. In addition to MFT 30 tax modules, an IMF account may have Civil Penalty modules (MFT 55) effective 1/1/85.

(c) Entity Module—The Entity Module contains data which describes the taxpayer as an entity and which applies to all records of the taxpayer. Detailed processes for establishing and maintaining the Entity Module are contained in Project 439 (IMF Account Numbers). This entity module contains groups of data which are maintained in separate sections as follows.

1 Entity Section—Contains Taxpayer's Name Control, Check Digit, SSN, and Spouse's SSN; name under which each income tax return was filed; current address and ZIP Code; District and Area Office handling the account (and District and Area Office holding TDA's if different); month in which taxpayer's tax year ends; type of tax return package to be mailed to taxpayer; indicators to show presence of open balance tax modules and/or TDA modules; account freezes and holds. Civil Penalty Name data may also be present.

2 Transaction Section—contains transactions which created or updated the entity module.

3 Deferred Action Section—Shows the cycle during which specified actions are to be taken, e.g., mailing 2nd notices, placing an account in TDA status, etc.

4 Audit History Section—contains information on the two most recent years which were under audit examination. The data retained includes the tax period, disposal code, audit results, and no change issue codes.

5 Offset Section—Used in communicating between different Programming Runs for the purpose of Offsetting between different Tax Modules of a taxpayer's account. When it has served its purpose, it is dropped from the file.

6 Vestigial Section—Shows data related to Tax Modules removed and recorded on the "Retention Register". Contains the tax class, cycle removed, control district office and tax period.

7 Energy Credit Tracking Section—Used by Examination Division for IMF Accounts containing residential energy credits.

8 IDRS Section—Shows modules under IDRS control indicating specific MFT, tax period and service center.

(d) Tax Module—A Tax Module contains records of tax liability and accounting information pertaining to the income tax and/or civil penalty for one tax period. Each Tax Module contains groups of data which are maintained in separate sections as follows.

1 Balance Section—This section contains the Module Balance (i.e., current debit or credit balance of tax and penalties); assessed and paid interest; Total Interest; Total Late Payment Penalty and Late Payment Penalty Assessed; Control DLN; and numerous indicators representing information pertaining to the module, some of which are: a duplicate or amended return was filed, taxpayer claimed more or less ES credits on the return than appear in the module, refund is being withheld, refund check was undelivered or redeposited, offsetting is being attempted, taxpayer claim is pending, IRS suit filed, closing code, Accounts Uncollectible, etc.

2 Status History Section—This section contains the current status of the module (i.e., current debit or credit balance of tax and penalties); if collection or refund action has been suspended, and if so why.

3 Settlement Section—Contains data necessary for return settlement such as AGI or total income, balance due or overpayment, tax liability per return, self-employment tax, ES credits claimed, overpayment credit elected to be applied to next year's estimated tax, penalties, etc. This section is deleted after settlement has been effected. The settlement section is not present for MFT 55.

4 Transaction Section—contains a transaction representing the filing of a return. This transaction contains only enough data to provide a historical record of the filing of the return and of the liability reported, late payment start date, and selected permanent audit data. In addition, the transaction section contains all transactions pertaining to the Tax Modules. They are derived from accounting input documents (i.e., tax liabilities, payments, assessments, abatements) and non-accounting transactions (i.e., Waivers, military deferment, etc.). Each tax transaction contains at least the Transaction Code, Cycle Posted, Document Locator Number, Transaction Date and Transaction Amount.

30(55)3 (1-1-96)**Functional Responsibilities—Martinsburg Computing Center****30(55)3.1** (1-1-96)**Initial Processing**

Daily Transaction Input Files are received from Service Centers and controls are established per Project 709.

30(55)3.2 (1-1-96)**Regular Processing**

- (1) Validate SSN's on input transactions as specified in Project 439.
- (2) Post input transactions and generated transactions to the Individual Master File consistent with established validity checks.
- (3) Analyze account for offset of taxes found on F5329 for offset to IRA.
- (4) Analyze accounts for offsetting debits and credits where permissible.
- (5) Offset IMF overpaid modules to BMF balance due modules.
- (6) Credit elect to subsequent tax periods—credit next year's estimated tax.
- (7) Extract necessary data and controls for producing refund tapes for Financial Center.
- (8) Extract necessary data and controls for Service Center output and message tapes.
- (9) Maintain checks on all data and accounting controls.
- (10) Ship output files and records to Service Center or elsewhere, as required, for preparation of final output products.

30(55)4 (1-1-96)**Administrative Rules****30(55)4.1** (1-1-96)**General**

- (1) Any transaction posting to the Individual Master File must contain an SSN. It must also contain a name control or check digit. The validation of the combination SSN and name control or check digit is covered in Project 439.
- (2) Transactions can originate from input documents containing assigned transaction codes, amount fields input as part of another transaction or generated transactions.
- (3) Each taxpayer is subject to the rules of validation. Refunds to be made are applied to outstanding liabilities if no offset restrictions. Under certain circumstances cross reference is made to a spouse's account, when the number is present, to effect settlement of the account.
- (4) The criteria for TDA issuance is controlled by Project 721.
- (5) All interest due taxpayer is computed on refunds to the 23C date less 12 days (13 days effective cycle 8435); offset interest to the due date of the liability. Credit interest is computed at 1% less than debit interest effective 1/1/87. Refer to 30(55)6.(12), Computation of Interest, for further details and applicable interest rate.
- (6) All post-journalized transactions are assigned the 23C date of the cycle during which journalization takes place.

IMF Operations

I R Manual
30(55)4.2

(7) The Assessment "23C" date will ordinarily be the Monday of the 2nd week following the week in which these transactions are processed and posted to the IMF Accounts, unless otherwise designated by Accounts Division in appropriate publications.

(8) When notices are to be sent to taxpayers that are identified as Spanish speaking District Office (DO) 66 and mail filing requirement of "7" the Computer Paragraph Number is in the 700 series.

(9) Extracts of IMF Accounts are not permitted when the extracts may be used outside of IRS, unless the Privacy Act or the Freedom of Information Act is utilized.

(10) Do not generate Check Digit for Accounts posted to the Invalid Segment.

(11) The term "Module Balance" as used throughout this Section is the algebraic sum of posted and assessed transactions excluding interest transactions.

(12) The term "Net Module Balance" is the algebraic sum of Assessed Transactions and consists of Module Balance, Interest Assessed and Interest Paid.

(13) The term "Total Balance" is the algebraic sum of "Module Balance," Accrued Failure to Pay Penalty (Total Penalty less Assessed Penalty) and Total Interest (Assessed Interest plus Accrued) and Interest Paid.

(14) Service Center Codes supersede Region Code. Generate the Service Center Code from the governing District Offices Code.

(15) When prescribed transactions post to a tax module, or a tax module must be analyzed for a scheduled action, compute interest, Failure-to-Pay-Penalty and/or delinquency penalty as required. Assess interest, assess Failure-to-Pay-Penalty when applicable, and assess delinquency penalty as prescribed in subsequent sub-sections. When interest and Failure-to-Pay-Penalty computations are made and not assessed, accrue the amounts of each computation.

(16) Non-Compute 1040—the input return record sent to MCC will contain a "Non-Compute" code of "2". MCC will determine if the return was timely filed; if not timely the non-compute code will be changed to a "1". Code "2" indicates special processing.

(17) Bypass normal processing, opening of modules, UPC, etc. when encountering Political Checkoff and IRA input "dummy" returns.

Weekly Processing of the Individual Master File by MCC

30(55)6.1 (1-1-96)
General

Generally, transactions input to the Master File must match an established account on both SSN and Name Control or Check Digit before the transaction can post to the account. Within prescribed limits, an account is established when no account already exists for the SSN of the input transaction. Establishment and updating of the Entity (transactions coded 000 thru 082), validation of the primary and spouse SSN, and merging of accounts is controlled in Project 439. Opening of tax modules and their related posted transactions, total account analysis, balancing, controls, and subsequent output is controlled by Project 445.

30(55)6.2 (1-1-96)
Transactions Posted, Generated and Related Projects

(1) All system projects are intertwined in the master file posting and analysis. For ease of reference, the related projects, their primary transaction codes can generally be equated as follows:

- (a) 439 IMF Account Numbers—Transaction Codes 000—082.
- (b) 408 Returns—Transaction Codes 150 and penalties 17X, 20X, 35X, 43X, 540, 57X, 610.
- (c) 710 Revenue Receipts—Transaction Codes 66X, 67X, 46X, and penalties, i.e., 27X, 280, 360, 47X, 61X, 64X, 68X, 69X, 70X, 71X, 72X, 73X, 74X, 82X, 84X, and 89X.
- (d) 711 Credit and Account Transfer—Transaction Code 370.
- (e) 714 Refund Transaction—Transaction Codes 41X, 76X, 77X, 80X, 83X, 84X.

(2) TC 001

(a) Resequences an account to a different TIN or accomplishes a merge of accounts. Generated when a TC 011, 040, or 041 posts. Carries the old TIN as reference.

(b) EPMF—When generated by Doc. Code 63, same as above. When generated by Doc. Code 64 transaction, assigned to the From Plan Data Module and to each of its return modules being resequenced because of a plan number change. Carries old plan number as reference.

(b) EPMF—Generated by Doc. Code 64 transaction. Assigned to the To Plan Data Module and to each of its return modules being resequenced during the merging of two plans for one EPMF entity.

TC	DR/CR	File	Abbr. & Title	Doc. Code
005		I,B A	MERG ACCT Resequenced Account for Merge	Generated Transaction
		E	MERG PLAN Resequence Plan for Merge	64

(7) TC 006—

(a) A merge (B,A,E) or merge-fail (I) account being resequenced to its Master File location. Indicates consolidation of accounts has been made (See TC 002 for A, B, & E; TC 005 for IMF). A TC 006 without a cross-reference TIN indicates an unsuccessful merge. A TC 006 (preceded by a TC 005) with a cross-reference TIN indicates a successful merge from the cross-reference TIN. Entity Control is responsible for resolving no merge situations.

Section 8. Master File Codes

.01 Transaction Codes IRM 3(27)(68)0

Transaction Codes (TC) consist of three digits. They are used to identify a transaction being processed and to maintain a history of actions posted to a taxpayer's account on the Master File. Every transaction processed by ADP must contain a Transaction Code to maintain Accounting Controls of debits and credits, to cause the computer at MCC to post the transaction on the Master File, to permit compilation of reports, and to identify the transaction when a transcript is extracted from the Master File. Transaction codes that are unique to IDRS are also included.

Many BMF and IMF Transaction Codes will not be used for IRAF. Also, the definitions of several transaction codes are necessarily changed since there will be no resequencing, offsetting, or computer generated interest. In addition, all refunds will be scheduled manually with the refunds posted to the IRAF using TC 640.

Refer to LEM 3(27)(68)0 for obsolete transaction codes.

Refer to Section 13.05 for pending transaction and merged related codes.

Reversal Codes

An "R" following the transaction code indicates the transaction has been reversed.

Payment or penalty transaction codes with reversal code "3" which are NOT LISTED in this section are actually reversal code "0" transactions. For programming purposes, the "0" has been converted to "3" to indicate the original payment or penalty transactions (or portion of it) which has been reversed. However, for account analysis purposes, the "3" reversal code should be considered as "0".

All transaction codes currently in use are listed on the following pages. Abbreviations used under the heading FILE are as follows: IMF "I", BMF "B", EPMF "E", IRAF "A", and PMF "P". EPMF may be shown twice for certain entity TC. For doc. code 63, they are applied to the entity module; for doc. code 64, applied to the plan data module.

TRANS CODE	DR/CR	FILE	TITLE	VALID DOCUMENT CODE	REMARKS
000		IBE	Establish an Account	BMF: 04, 63 80, 81 IMF: 63 EPMF: 04, 63 IRAF: 63	Adds a new taxpayer entry to the applicable Master File. IMF— Establishes Scrambled SSN Indicator. TC 000 with DLN block/serial overlay of 99999 is computer generated from joint return with CCCF to create an account for the spouse.
001		E	Establish a Plan	64	Establish a Plan Data module.
		BE	Resequence an Account due to a TIN Change	Generated Transaction	Resequences an account to a different TIN or accomplishes a merge of accounts. Generated when TC 011, 040, or 041 posts. Comes old TIN as reference.
001		E	Resequence due to Plan Number change	64	Resequences a plan data module due to a plan number change. Comes old plan number as reference.
001		IA	Resequence an Account	Generated Transaction	Resequences an account because of an SSN change or a change in SSN validity.

Tax Administration: IRS Could Do More to Verify Taxpayer Identities

GAO reviewed the Internal Revenue Service's (IRS) procedures for processing and posting tax returns with missing or incorrect social security numbers (SSN), focusing on: (1) the growth in accounts with missing or incorrect SSN on IRS individual master file (IMF); (2) IRS procedures for verifying the identities of tax return filers; and (3) the potential effect of these procedures on IRS plans to modernize the tax system and on the income-matching program.

GAO found that: (1) the average annual growth rate for invalid IMF accounts was significant from 1986 through 1994; (2) IRS has revised its procedures to require taxpayers with missing or incorrect SSN or temporary numbers to provide documentation that verifies their identity; (3) these revised procedures could help reduce the number of invalid IMF accounts when fully implemented; (4) the IRS Tax Modernization System is in jeopardy because the current master file structure allows two or more taxpayers to have accounts under the same number, or one taxpayer to have several accounts under different numbers; (5) the IRS income-matching program is hampered by posting returns to IMF invalid accounts; and (6) IRS plans to assign permanent taxpayer identification numbers to filers that are ineligible to obtain SSN and encourage the use of these numbers on information returns.

 1. When the "Justification indicator of 1" is present, the account is treated as valid.
 2. "Justification indicator of 2" will reverse the account to invalid.
6. When CC IRCHG is used, a TC 016 will generate. A computer generated TC 510 will automatically release any overpayments, EITC due the taxpayer .
7. The account is subject to DM-1 quarterly updating.

* Use an original return blocking series for electronically filed returns, and cases in which the TC 150 is an SFR/Dummy TC 150. The original return blocking series is necessary since there is not a paper original return for either of these type cases. If the copy blocking series is used, a CP notice will be generated instructing Files to pull the original return and associate it with the examined closing which is inapplicable.

@ See Exhibit Text -.05(2) for a list of non-examined disposal codes.

& The copy blocking series will generate a CP notice instructing Files to pull the original return and associate it with the examined copy.

+ This blocking series will not generate a CP notice or control DLN therefore the original return will remain filed under the DLN that contains the "X".

\$ This blocking series will generate a control DLN but will NOT generate a CP notice to pull the original return and associate it with the examined copy. In most cases, the original return will remain filed under the TC 150 DLN.

For ADJ54 Blocking series refer to IRM 3(15)60. For Appeals manual assessments, use 135-138.
